Ship faster with lightning-fast indexed blockchain data

Focus on building quality products and growing your business while having complete access to structured blockchain data at scale.

Get the precise data you need

Experience a deep level of programmatic access to structured blockchain data with **Verified** and **Custom** Endpoints.

Verified Endpoints provide access to premade, common data views such as token transfers, NFT sales, or historical wallet balances. For more complex aggregations and full customizability, gain direct access to our tables by writing your own SQL queries and deploying them as Custom Endpoints. All data can be accessed using our simple data abstractions.

Supporting enterprises and single-person projects

Launch your MVP and grow to support millions of concurrent users with blockchain data infrastructure that scales using **Dedicated Read Replicas.** These are dedicated database instances that allow unthrottled access to the entirety of our indexed data. Run hundreds of concurrent queries, integrate directly into production services, and use as the foundation for a robust crypto data stack.

All data can be surfaced via webhooks or websockets for streaming and notifications.

2,000+

Protocols indexed across **10 chains**

1,700+

DEXs indexed including swaps and on-chain OHLC pricing

400+

NFT marketplaces, lending protocols, bridges, and mixing services indexed

40+

Companies or protocols using Transpose *not including individual users

Built to handle the most complex, high-demand operations

Power frontend interfaces

Show live transaction statuses, current and historical wallet balances, or monitor trading positions by leveraging lightning fast, indexed blockchain data.

Automate business operations

Whether you are an asset manager, DeFi protocol, accounting firm, or layer 1 that needs to create investor reports or end-of-day files for market-makers, Transpose gives you complete access to 2,000+ indexed protocols to easily track usage, understand blockchain activity, and create reports.

Meet your accounting and tax needs

Gain a complete picture of any given wallet's on-chain activity irrespective of its size. Transpose provides complete wallet data on DeFi interactions, historical token and NFT holdings, as well as minute-by-minute OHLC pricing derived from DEX swaps.

Build machine learning models and perform financial analysis

Remove the tediousness of organizing unprocessed blockchain data when building complex machine learning models and conducting investment research by feeding your backend with structured blockchain data in near real-time.
